Summary

Backend-focused Full Stack Engineer experienced in building scalable, real-time web applications using Node.js, PostgreSQL, Redis, and WebSockets. Proven ability to design microservices, optimize database performance, and handle high-concurrency systems. Experienced in SaaS platforms, LMS systems, and real-time multiplayer applications.

Education

KIET Group of Institutions

Bachelor of Technology in Computer Science; CGPA: 8.0/10

Oct 2022 – Present

Ghaziabad, India

Aatmadeep Vidyalaya

Intermediate (12th Grade); Percentage: 78.9%

2022

Gorakhpur, India

Experience

Technology Business Incubator (Govt. of India) — Live

Full Stack Developer Intern (Backend-focused)

Sep 2024 – Dec 2025

Ghaziabad, India

- Developed an enterprise-grade LMS portal supporting 100+ startups with automated onboarding, funding, and mentoring workflows using Node.js, Express.js, Prisma ORM, and PostgreSQL.
- Optimized database queries using Prisma extensions, improving API response time by 50%, and built the React.js/Redux frontend for real-time application tracking.
- GitHub: github.com/Prasannam23/Tbi_proof_of_work_frontend

Volopay

Backend Developer Intern

Feb 2026 – Jun 2026

Remote

- Worked across APIs, databases, and the webhook relay infrastructure powering Volopay's core fintech services.
- Designed and maintained REST APIs consumed by internal and partner services, following schema validation and versioning practices used across the platform.
- Optimized PostgreSQL queries and schema design to improve response times and support growing transaction volume.
- Contributed to the webhook delivery system notifying downstream services of platform events such as payments and approvals, including retry and failure-handling logic.
- Improved reliability of the webhook delivery pipeline by refining retry logic and monitoring, reducing failed and delayed event deliveries.

Projects

QualityVeda LMS Platform (Freelance) — Live

Dec 2024

- Designed and developed a production-grade LMS platform for NABL pathology certification workflows.
- Built full-stack architecture using Next.js frontend and Node.js + Express backend.
- Integrated 20+ REST APIs for authentication, courses, certificates, progress tracking, and user lifecycle management.
- Designed relational PostgreSQL schema using Prisma ORM with optimized indexing and relationships.
- Implemented automated certificate generation, multi-role dashboards, and AWS-based deployment.
- GitHub: github.com/Prasannam23/qualityveda2
- Tech Stack: Next.js, Node.js, PostgreSQL, Prisma, Redux Toolkit

Webhook Relay — Reliable Event Delivery System — Live

Jun 2025

- Built a Svix/Hookdeck-style webhook delivery platform guaranteeing at-least-once delivery via a decoupled ingestion-and-queue architecture.
- Designed Express + PostgreSQL ingestion API fanning out events to subscribers via BullMQ + Redis job queues, with exponential backoff retries and a dead-letter queue with manual replay.
- Secured deliveries with HMAC-SHA256 request signing for subscriber-side payload verification.
- Built a real-time React dashboard (Socket.IO) visualizing per-subscriber delivery status (queued/retrying/delivered/dead) with response codes and latency.
- GitHub: github.com/Prasannam23/Webhookrelay
- Tech Stack: Node.js, Express.js, PostgreSQL, Redis, BullMQ, React, Socket.IO

Scribble — Real-time Multiplayer Drawing Game- Live

Oct 2024

- Developed a real-time multiplayer drawing game enabling collaborative sessions with instant synchronization.
- Implemented WebSocket-based communication for low-latency state updates and player interactions.
- Used Redis for session management, persistence, and voting mechanisms.
- Optimized real-time protocols to minimize lag and ensure smooth gameplay experience.
- Tech Stack: Node.js, Express.js, WebSockets, Redis

Skills

- Languages: JavaScript, TypeScript, Java, Python, C, SQL
- Web Technologies: HTML5, CSS3
- Backend: Node.js, Express.js, WebSockets, Redis, Pub/Sub, Microservices, FastAPI, BullMQ
- Frontend: Next.js, React.js, Redux Toolkit, Zustand, Tailwind CSS, Web Workers
- Databases & ORM: PostgreSQL, MongoDB, MySQL, Prisma ORM
- Tools & Platforms: Git, GitHub, AWS, Docker, Linux, Postman, Redis Clusters, Socket.IO
